

Atulya Directory:

Atulya Directory is a web directory script that is intentionally developed for the purpose of collecting web page links. The benefit of creating this web directory script is to group the source of information which available on the web into certain categories. This helps the people to find the information about your product and service by doing category search from the directory and web search engines to enhance the efficiency of Web crawling. By installing this Directory script on your website you can make more earnings from the people who wish to promote their website in your Directory. This not only makes other websites to promote but also brings your site more popular and converts into business.

The Atulya Directory consists of three parts and they are as follows:

- User Area
- Admin Control Panel
- Additional Features

The brief explanation of the above mentioned parts are to be continued.

User Area:

User Area represents the front panel of the Directory that consists of list of categories where the user can submit his website URL by selecting the category. The front panel of the directory also indicates the Home page of the Directory that consists of list of categories/sub categories and other menus, which allows the users to search information from the collection and to submit his own link.

Categories/Sub-Categories:

In the home page of the web directory, visitor can view the list of categories that is subsided by the sub-categories. If the user wants to gather some information from the collection of link, then he can select the category and also choose the sub-category for finding his required information. For example, if the user wants to find the list of websites that provide the service of entertainment. Then he can choose the category Arts & Architecture and select the Entertainment that provides the list of Site which is submitted on this category.

Advanced Search:

Atulya directory script has the feature of Advance searching that is available in the right side of the home page, so that the visitor can type the keyword and press the search option to access the required information about the product or service from the website link submitted in the directory.

Submit Link:

This is the practical part of the Atulya Directory Script that allows the users to submit their own website URL. User can submit his Link by following the guidelines which is exhibited on the top of the submitting form. The Directory Script has the feature of publishing the submitted link as permanent or annual listing with price and also the reciprocal link with price is available in this script.

User Login:

This part helps the user to know his account information of submitted links and their status. By login to the directory user can view his listings and identify the status of the listing subscription as paid or unpaid. Here the validity period also mentioned for the user to know about the listing period.

User Logout:

Once the User completed his work by viewing his listings and wants to end his login session, then this part do the termination for the user to log out.

Latest Listings:

The recently submitted link from all categories will be available on the home page of the Web Directory. The notable one in the latest listings is the Featured listing and the Regular listing website. Featured listings are nothing but the website information is available in a background color but that is not present in the Regular listing website.

Most Viewed Listings:

The Most Viewed Listings index the list of websites that are mostly viewed by the visitors and users. This also contains the Featured listing websites and Regular listing websites that helps to know the popularity and product service of the particular website.

Blog:

It contains the list of articles that helps the directory visitors or users to read some additional information and gain knowledge about any product or service. A blog typically contains text content, images, video content that also makes the readers to leave comment in an interactive format which helps for link building.

Sitemap:

Sitemap contains the links for all the categories and submitted websites that are available in the web directory. It makes the search engine to acquire the entire links from your website in a single page of sitemap and get indexed in the search results.

Admin Control Panel:

Admin control panel plays a vital role in the Atulya Directory script that provides the various applications for the administrators to manage the web directory. Here the administrator can be provided password to login securely and perform the several actions as follows:

- ✓ Add or Edit the required categories
- ✓ Manage the categories settings
- ✓ Posting Articles.
- ✓ Posting Advertisements

- ✓ Manage the Payment Subscription List

The brief explanations about the process of the Admin area are to be continued.

Manage Category:

Atulya Directory Script enables the admin to manage the unlimited of categories and sub categories with ease. The administrator can add, edit and delete the category based on their requirements that can be limited only by the administrator imagination.

Feature Category Position:

This assists the administrator to sort the categories based on their popularity. Here the administrator can fix the category position and submitting the same which reflects in the Home page of the website.

About Us:

Once the Atulya Directory Script is installed and running successfully then the next thing is to promote your product to the visitors and users. For this you can share your information and submit it in the 'About Us' section that exhibit about you to the website visitors and users.

Site Settings:

In Site Settings, the administrator can add the Site Title, Description, Keywords and Image logo for his web directory site.

Template Settings:

This is one of the special features available in the Atulya Directory Script. If an administrator wants to change the template of the directory then he can choose any one of the templates from the Template settings.

Payment Settings:

This section allows the administrator to set the payment mode for the users who wish to submit their website link in the Permanent Listings or the Annual Listings in the web directory. The payment settings contain the cost, duration that makes easy for the admin to set or change the payment as required.

Manage Articles:

Atulya Web directory script allows the administrator to submit the article and publish it into the website. Admin can submit his own article by going through the Manage Article which also has the option to edit and delete the articles.

Manage Article Comments:

Posting an article is mainly for the purpose of sharing the information about any particular product or services. This makes the users or visitors to read the content and leave their own comments about the topic. Now the administrator can manage the user's comments by approving or deleting them in the post.

Add Partners & Advertisement Link:

The Process of adding the Partners link and advertisement link are done in this section. Using this section admin can add his partner and the advertisements that will be displayed on the home page of the Web Directory.

**Partners Link Listing:**

This section indexes the list of partners incorporated in the web directory. If the administrator wants to delete any one of his partner link that is already added in the web directory, then he can use the delete option and remove the partner link from the listings.

Advertisement Link Listings:

The advertisement links that are published in the web directory are listed in this section. The Delete option available in the advertisement link listings helps to remove the advertisement link that is not required.

Manage Advertisements:

The manage advertisement helps to set the position for the advertisement to be posted, that may be in header, side bar and the footer of the website. It also has the option to post advertisements in each page of the articles.

Payment Directory Listings:

The list of links that are subscribed for the payment subscriptions plans are listed in the Payment Directory Listings with the details of Email ID, Link Title, Link URL, Payment status and the Posted date.

Free Directory Listings:

The Free Directory Listings shows the list of website URL that is submitted in free of cost. It also shows the status of the submitted link whether it is approved or not.

Payment User List:

The list of users who has paid payment for their listings are listed in the Payment Users List with the details of user name, payment date and expiry date of the subscriptions.

Unpaid User List:

This section exhibits the list of users who are not paid for their listings are listed in the Unpaid User Lists with the same details as mentioned above in the Payment User List.

Contact List:

The contact list helps to manage the user contact information such as user name and their email id with the delete option.
